Advantages of working with REEEP

- ✓ A flexible, reliable, fast, and proven way to support low-carbon energy development
- ✓ Huge value on original investment by up-scaling solutions
- ✓ A direct voice in decision-making at all key approval gates
- ✓ Extremely quick action that can move from a project call to contracting in 6 months or less
- ✓ Robust and proven systems with tight monitoring and evaluation
- ✓ Cutting-edge data and knowledge management systems

Scaling up successful clean energy business models in developing countries and emerging markets

The Renewable Energy and Energy Efficiency Partnership (REEEP) is a non-profit public-private partnership for accelerating clean energy in developing countries and emerging markets.

REEEP initiatives use renewable energy and energy efficiency to support energy access.

Strong track record

Building network of clean energy champions: 385 Partner organisations including 45 governments and 6500 Friends, and a global network of five Regional Secretariats hosted by organisations that share the clean energy agenda and help deliver REEEP services on the ground.

Funding clean energy projects: REEEP has funded more than 180 projects in 58 countries, disbursing € 18.4 million and leveraging a further € 35.1 million in co-funding over the last 8 years.

Empowering through information: REEEP manages the world's largest free information portal on renewable energy and energy efficiency, www.reegle.info, attracting 220,000 unique users per month, mostly from developing countries.

How REEEP adds value

Project call facility: This flexible turn-key infrastructure can handle an entire project management life cycle from public call and selection through to measurement and evaluation. This is an ideal way to scout for and to trial new solutions in specific or nexus areas.

Developing up-scaling pathways: REEEP works with clean energy entrepreneurs such as SELCO India and IDEAAS in Brazil to help successful business models grow and replicate. This includes developing a supportive, stable policy environment and creating critical momentum for attracting investment.

Attracting private investment for energy access: REEEP cooperates with partners to mobilise funding for clean energy projects that increase access to modern energy services for the 1.3 billion energy poor.

Using IT skills to make energy information accessible: REEEP provides cutting-edge expertise in information and knowledge management, promotes a new, ground-breaking way to share data (Linked Open Energy Data), and works with developing countries to support Open Government Data.

These approaches all support the UN Sustainable Energy For All (SE4All) initiative to achieve universal energy access.
